

SUBJECT: **Advanced International Economics**

HOURS: **30 + 15**

ECTS: 7

Name/title of the author:	Piotr Stanek, PhD
Course Description:	<p>This graduate level course is composed of two parts. The first one covers the problems related to economics of exchange rate regimes (International Macroeconomics) and the second one presents selected more advanced problems of theory and empirics of contemporary international economics.</p> <p>The first part is significantly based on a coursebook by Peter Montiel, <i>International Macroeconomics</i>. Thus, it reminds the basic concepts of international macroeconomics: balance of payments and its components and introduces a simple model of the open economy. Basing on this model it discusses some examples of adjustment mechanisms under alternative exchange rate regimes: “hard” and “soft” pegs as well as (more in details) floating exchange rate system.</p> <p>The focus of the second part is on the subjects which are very often omitted during undergraduate international economics course are on problems which require some additional insights, to allow for a deep understanding of today’s globalizing world. These problems include selected elements of international trade theory: theoretical explanations of the dominance of transnational companies in certain sectors of world economy, on the grounds of imperfect competition theory; selected issues of purchasing power parity theory, real and effective exchange rates and convergence problems: technical methods of computation and implications for catching-up countries (Balassa-Samuelson effect) as well as theory and empirics of domestic and external debt sustainability.</p>
Learning Outcomes (Goals and Objectives of the course):	On the successful completion of this unit, students should have understand a range of theories, models and analytic tools explaining selected crucial phenomena of contemporary international economics.
Entrance qualifications:	Microeconomics, Macroeconomics, International Economics I
Course Content:	<ol style="list-style-type: none"><li>1. Open-economy macroeconomic accounting and macroeconomic factors influencing exchange rate markets.</li><li>2. Introduction of a general analytical framework</li><li>3. Macroeconomics of “hard” fixed exchange rates</li><li>4. Macroeconomics under “soft” pegs and imperfect capital mobility</li><li>5. Floating exchange rates: transitory vs. permanent shocks</li><li>6. Exchange rate dynamics under floating exchange rate regime</li><li>7. International monopolistic competition and firms’ strategies</li><li>8. Purchasing Power Parity (PPP): computing and international statistics</li><li>9. PPP Implications: Balassa-Samuelson effect in theory and empirics</li><li>10. Effective exchange rates („can we have DEER with BEER without FEER”: Domestic, Behavioural and Fundamental Effective Exchange Rate)</li><li>11. Debt dynamics and assessment of domestic and external debt sustainability</li></ol>
Assessment policy (examination):	<ol style="list-style-type: none"><li>1. Participation grade (exercises): 40%</li><li>2. Written exam: 60%</li></ol>
Course materials/bibliography:	<ol style="list-style-type: none"><li>1. <b>P. Montiel, <i>International Macroeconomics</i>, Wiley-Blackwell, 2009.</b></li><li>2. Krugman P., Obstfeld M., <i>International economics</i>, ch. 7: Economies of Scale, Imperfect Competition and International Trade;</li><li>3. Feenstra, C.R., <i>Advanced International Trade</i>, Princeton University Press,</li></ol>
